BiOptima IT

Configuration

The Telstar solution for Hospital Pharmacies in applications that involve the use of pharmacy compounding software programs.
The majority of hospital pharmacies rely on software solutions to aid them in dose preparation and improve the safety of the medications and the pharmacy workflow.
These software solutions can include on-line (weight-based) gravimetric verification, barcode reading, automatic and electronic documentation of the preparations.
IT configuration is a recent addition to the Bioptima family of Microbiological Safety cabinets specifically engineered to address the current needs of pharmacies.
This configuration is valid for all Bioptima models: One, Cyto, Exa and Biopima.
Designed and manufactured according to EN 12469 and the DIN 12980 norms these units are equipped with all the necessary hardware for effortless integration in the daily routine of a modern day pharmacy or to upgrade existing pharmacies to a state of the art compounding facility.

Top Features

RESEARCH & MEDICAL
